Why profit lockdown rose sharply on October 29, 2020, 03.22 ISTCMIE data shows that while the state unemployment rate averaged 46% in April and May, the highest month of lockdown, the entire Indian unemployment rate was 24% over the same period. Even though the unemployment rate in the province has since decreased to 12%, it is also much higher than the India forecast of 6.7%. October 22, 2020, 11.46 ISTCMIE data shows that the monthly employment rate in 2020-21 and the same month of 2019-20 contracted continuously until the same month of 2019-20, then rose 254 basis points in September. There is concern that it could expand further in October 08 October, 2020, 02:33 PM ISTData CMIE's CapEx service this launch, Implementation and capacity expansion follows the completion of projects in India, which shows that completion rates for projects have dropped rapidly to low levels, ranging from 0.2-0.28 in the first two quarters of the current fiscal. Compared to the average completion rate of over 1% in the recent past. 18 September, 2020, 11.42 ISTBuns among software engineers, physicians, teachers, accountants, analysts and professionally qualified and employed types in some private or government institutions. However, this does not include qualified self-employed entrepreneurs. 24 September 2020, even the employment rate in 11.52 IST Countries was as low as 37.5% in the first three weeks of the month compared to the average employment rate of 37.9%. In its weekly analysis of the labour market for the week ending November 1, CMIE implies that the negative trend in the employment rate since June 21 is a concern and may fall further. Said. Data for the week ending August 2, 2020, 01.56 ISTCMIE showed that in July the employment rate stood at 37.6%, which said what was much lower in 2019-20. In the pre-Covid period, the employment rate was 39%. The rescue process accelerated in June and continued until July. However, it is not complete and the recovery process has slowed down. CMIE said. 22 October, 2020, 12.20 according to IST CMIE, it is difficult to keep the employment rate from slipping. To keep the employment rate unchanged, the economy needs to create additional jobs. Needing to work to stay where it is, CMIE suggested September 18, 2020, 11.38 a.m. in India hit in August. This is a backing down trend since April, when more jobs were created in the hinterland. ET's Yogina. 04 September 2020, 05.30 ISTThis August marginally fell by 37.5% compared to 37.6% in July, pushing the overall employment rate in the country to significantly 8.4%, the Indian Economy Monitoring Centre said. 20 August, 2020, 09.39 ISTOn The situation of basic, salaried employees has deteriorated since the start of the lock-up since July, with losses up to 18.9 million. CMIE added that this was an unhealthy recovery and that the situation for salaried jobs was worsening. 06 December 2020, 08.43 The ISTThe International Monetary Fund forecast GDP growth of 8.8% for India in 2021-22. Economists and statisticians say GDP contracted from minus 7.5% in the September quarter and minus 23.9% in the June quarter if the economy starts to recover - next year's chart will be a mirror image of what will be achieved this year. more_vert CMIE - Indian Economy Monitoring Center Click the alphabet to view the abbreviation that begins with the selected alphabet. Link to this page: Meanwhile, according to MAHESH Vyas of CMIE, the role of the private sector in new investment proposals fell from 62 per cent between 2006 and 2011 to 47 per cent between 2014 and 2016. Even the amounts mostly committed by indebted government-backed companies have already fallen from insignificant levels during Modi's term. The latest data published by the Center for Monitoring the Indian Economy (CMIE) show that the value of stalled projects has recently increased by a tailed Rs. central Indian Economy Monitoring (CMIE) published data on e-works earned or lost during the Covid-19 lockdown period (April-July 2020). CMIE is a leading business information company. It was founded in 1976 as an independent think tank. CMIE generates economic and business databases and develops custom analytical tools to deliver them to its customers for decision-making and research. Analyzes data to decipher trends in the economy. Highlights Salaried Affairs: They experienced a total loss estimated at 18.9 million during the period of April-July 2020. In April, 17.7 million salaried jobs were lost. After winning 3.9 million jobs in June, 5 million jobs were lost again in July. They offer better employment conditions and better wages and have a higher share of rural areas in urban parts of the country. They are more resistant to economic shocks and do not disappear easily, but when they are lost it is much more difficult to get back. Only 21% of all employment in India is in the form of a salaried employment. Loss of urban salaried jobs, on the economy is likely to have a debilitating effect, but also causes immediate distress Households. Since the announcement of the lockdown, several companies in industries have gone to layoffs and jobless layoffs, along with pay cuts. Unregistered and Unemployment Jobs: This category improved in the period April-July 2020, rising by 2.5% in 2019 from 31.7 to 32.6 million in July 2020. This is due to the gradual opening of the country. This category of employment accounted for about 32% of total employment, but in April 2020 it experienced 75% of this year. Of the total 121.5 million jobs lost in April 2020, 91.2 million were lost from this category. Small traders, hawkers and day-to-day paid workers were the worst affected by the lockdown. Farm Works: Jobs lost in non-agricultural sectors have led people to turn to agricultural employment. The agricultural sector has 14.9 million jobs in the period April-July 2020. In 2019, 42.39% of india's workforce was employed in agriculture. Ltd (CMIE) viewed by these thinkers during the industrial revolution, the most remarkable creativity can exploit the technologies that are being born of power and mechanics by creating an explosive pace and bringing new opportunities for those who know how to exploit them. In the near future, the growth in databases, computers and communications technology will revolutionize business tools and create unimaginable opportunities for those who know how to use these tools. The latest phase of economic liberalization and globalization has accelerated the pace at which this change is occurring. Decision makers and planners are increasingly relying on hard facts, figures and sophisticated analytical tools and analysis to survive in a brutally competitive environment. CMIE unique information, computer and communication are placed to meet the challenges of the new world. It has a clear advantage in terms of database size, diversity and quality, and a clear perception of the larger framework in which the economy works. It is a research organization dedicated to proving efficient Economic Information Services. The center was founded in 1976 by distinguished economist Dr Narottam Shah. It is a private and independent research organization owned by family members of the late Dr. Narottam Shah. CMIE is a unique organization that unites regular services with economic research activities. It is based on the latest and authentic data on business and economics by a wide range of business businesses, government agencies and academia. The center is the most up-to-date and reliable important resource today The sharpest analysis and best insights into current future trends in the Indian economy. CMIE's think tank consists of professionals with long-term experience in economics, corporate analysis and computing technology. CMIE has more computers than the total number of employees, including all administrators and support staff. All computers are uncompromisingly connected to the network over TCP/IP. A connection to the outside world is made through a line leased to the Internet and a fax/modem pool used for both inbound dial-up users and outgoing information. CMIE was one of the first users of Internet technologies in India. A large number of governments and NGOs produce statistics for kilometers. CMIE specializes in interpreting and analyzing this economic information to make it easily available. This ensures consistent and compliant Business Information Systems. Increased speculation and mutual dependence of economic activism are intertwined with the changes in the outer surroundings of the business world. CMIE provides the most reliable environment, Information possibilities, opportunities and direction of the future in foreign economic development. Headquartered in Bombay, CMIE has offices in Bangalore, Calcutta and Delhi. Services CMIE has built a large and well integrated database on the Indian economy. Although CMIE, in fact, is a value-added information services company, its existence has clearly spread throughout the entire food chain of the information industry. Currently, CMIE provides four types of services. Magnetic Medium Enterprise Knowledge (CMM) CMM is a computerized database on more than 3,300 central and large companies in India, along with a powerful easy-to-use query, report creation and graphics software. The coverage included listed companies, public sector companies, partner sector companies, cooperatives and several closely held firms. CMM is an effective analytical tool in all organizations that require analytical and informative decision support related to companies and industries. Cmm analytical ability such as application capital research, portfolio analysis, credit analysis, corporate planning, investment decision making, inter-company and cross-sector analysis, research competitors, industry, consultancy, journalism, etc. depends on the twin foundations of the voice database and flexible inquiry. The CMM setup kit comes with more than 100 ready-to-use reports. It is meticulously designed by experts in the field to provide useful understandings. CMM runs on IBM compatible computing and is updated every two weeks. Daily updates are also available via Bombay modem and will soon be available in Delhi and Bangalore. Some of the features are the Investment Toolkit, including Enterprise Analytics, Industry Research, and Techniques. CMM is also available in the stand-alone version, such as the LAN version. Economic Intelligence Service (EIS) management is the backbone of information systems. The service has a number of documents that follow the latest and most reliable information and analysis about the Indian economy. The service provides about 60 documents spread across approximately 5,000 information-filled pages. The documents are created by experts in the relevant fields and always contain the latest and authoritative data. The documents contain information on all major sectors of the economy, including agriculture, industry and individual firms. Macro_economic such as income, public finances, financial sector, balance of payments, prices and exchange rates are comprehensively discussed. Historical, current and related trends in the economy are presented in the documents together with expert analysis. Forecasts are provided at the economic, sectoral and sub-sectoral level. The reports are written in a comprehensive but concise and clear way, reflecting the Indian economic system and data authorized technical understanding. Some of the reports include Economic Outlook (Quarterly), Review of the Indian Economy (Monthly), Key Statistics - Vol. 1 - All India and Vol. 2 - States (Annual), World Economy and India's This Place, Statistical Profiles 500 Private Corporate Giants (Annual), Corporate Results accompanied by insight analysis of developments (Half Year), Company Finance - Industrial Aggregates, Market and Market Shares (Annual), Shape of Things to Come - Volume 1 & 2, Profiles of Districts, Basic Parameters in Urban Centers of India, Industrial Production Trainings, Performance of Agricultural and Foreign Trade Statistics. Investments Intelligence Service This service is designed to provide continuous and detailed updates on investment activities in the country. Information about investment projects within the scope of this Service is complemented by how sharply investment trends are analyzed by industry, workplaces, location, etc. A summary of projects in the mining, manufacturing, electricity, transport and irrigation sectors is included in the Investment Projects Survey, which examined more than 3,000 investment projects, published quarterly and spread over nearly a thousand information-filled pages. The quarterly summary discusses all major new units being installed, regeneration and modernisation projects, or expanding capacities. The content of information per project are: names of organizers, copromoters, collaborators, etc., capital cost, financial resources and uses, plant location, product and capacity details, and implementation stages of individual projects. The service also provides the Monthly Investment Projects Review, which provides the latest update on projects under implementation. This also offers the characteristics of investment trends in individual sectors, work houses, regions, etc. The service is invaluable to corporate planners and investors in predicting future trends in supply and demand in the industry and industries, marketing managers in identifying potential emerging markets, and researchers and policymakers when evaluating policy options. Commissioned Projects is a relatively new area of activity. Currently, the demand for projects is higher than our existing capacities in terms of human resources, and this is an area where we are currently expanding and likely to establish a full-fledged projects division in New Delhi. Anvl Online Information Service New Services This CMIE will provide easy access to a large and integrated economic and business database. The service is low priced and designed to target large volumes of users. CMIE is expanding its presence by establishing offices in 12 centres around the country by the end of next year. There are also efforts to set up overseas offices. CMM plugins These are a series of analytical tools that will work on the user's cmm installation. The tools are designed for implementation in very specific areas such as credit risk assessment, portfolio optimization, portfolio assessment as credit collateral, and corporate performance forecasting. Industry Information Services This in-depth address the specific needs of industrial research efforts. CMIE intends to use advanced databases and expertise in this region for a special service to meet this growing market. Marketing and Regional Information Services This service is caused by CMIE's unique regional economy databases. This is one of the large databases that CMIE has created over the past two and a half years. You will find a wide range of applications among this service marketing and regional planning experts. International Marketing Today for demand, information and analysis of the Indian Economy, it has increased significantly from the international community. To meet this demand, CMIE has entered into strategic marketing alliances with a number of international agencies involved in the dissemination of information. This includes: Reuters Corporate Information Datastream International, this is a UK-based company with a turnover of approximately USD100 per year. They will disseminate information at the company level originating from CMIE. Knight Ridder Information Co., Ltd. dialog knight ridder online information service arm wants to distribute a wide range of information about the Indian economy and corporate sector, provided by CMIE, spread to customers all over the world. Ravi Data Bases is an NRI company that wants to spread CMIE enterprise information over this Internet. FOR SUBSCRIPTIONS AND OTHER DETAILS, CONTACT: India Economy Pvt.
